CSC 1405 – Advanced Software Engineering

Sprint 1 Execution Report

1. Sprint Overview

Sprint Duration	Week 11 - Week 12
Primary Goal	Establish foundational database architecture and deliver core student-facing functionalities.

2. Work Planned vs Completed

For Sprint 1, our engineering focus was directed toward the high-priority user stories from our product backlog to ensure a Minimum Viable Product (MVP) core.

Planned Objectives:

- Setup Development Environment & construct MySQL relational tables.
- **US-01:** Create student account (Registration algorithms).
- **US-02:** Deploy Secure Login/Logout mechanisms.
- **US-03:** Add a new task functionality (Title, Deadline processing).
- **US-04 & US-05:** Dashboard visualization and status updates.

Completed Milestones:

All planned user stories for this specific sprint were successfully achieved on schedule. The database tables (users and tasks) were established within the XAMPP ecosystem. We securely bridged frontend form interactions with backend PHP code using procedural database connection logic. Furthermore, the UI was styled utilizing a pure CSS architecture to ensure a responsive and highly professional glassmorphism aesthetic.

3. Future Goals (Planned for Sprint 2)

In the upcoming sprint, we aim to extend the system by implementing administrative controls and a real-time notification engine. This will include:

- Developing the Admin Dashboard for global task monitoring.
- Implementing the Task Assignment system for instructors.
- **Notification System:** Alerting students when tasks are assigned or approaching deadlines.

3. System Bottlenecks & Resolutions

During the execution phase of Sprint 1, the primary architectural challenge was ensuring the session state remained secure and intact between different HTTP redirects (from login.php to index.php). We effectively resolved this friction by centralizing the session_start() command strictly inside a universally included header.php component, eliminating "headers already sent" PHP exceptions natively.
